

Electric Usage Guide

About this Guide

This guide estimates the annual kilowatt-hour (kWh) usage and energy costs of common household products. Hours in use are based on a typical four-person household. Your hours of use may vary. Annual kWh may vary depending upon model, age, and use. Annual cost is based on an average of 12 cents per kWh. Appliances with annual operating costs of \$100 or more are bolded. To estimate the annual cost of operating an appliance not listed, multiply the annual kWh by your utility's kWh rate or by the average rate of 12 cents.

Annual Electric Cost for a 27" LCD Flat Screen Television

$$300 \text{ kWh used annually} \times \$0.12 \text{ Average kWh rate} = \$36 \text{ Annual Cost}$$
